

CrisisConnect AI

Project Description

CrisisConnect AI is an offline-first assistant for humanitarian workers and people affected by emergencies. It prepares trusted crisis information before field use, then helps users ask voice or text questions when internet access is weak, unavailable, or unreliable.

Live app: <https://crisis-offline-connect.lovable.app/>

Demo video: <https://www.youtube.com/watch?v=ns6HmOkDJHU>

Created by: Hossam Elshahaby

Problem

During disasters, responders and affected people often need quick guidance from long PDFs, shelter rules, local updates, health guidance, protection documents, maps, and contact lists. These sources may be hard to search during a crisis, and connectivity may fail exactly when help is needed.

Solution

The app lets users prepare an offline pack from trusted sources such as Red Cross, IFRC, ICRC, WHO, UNHCR, local emergency pages, uploaded PDFs, maps, and contact lists. During field use, it searches cached sources locally, gives cited answers, and supports same-language communication.

Main Features

Feature	Description
Offline preparation	Caches trusted websites, documents, contacts, and facility data before deployment.
Voice-first help	Users can ask crisis questions by voice or text.
Source-grounded answers	Answers cite cached sources and clearly say when information is missing.
Emergency guidance	Shows and speaks local emergency numbers, such as 112 in Sweden/EU or 911 in the US.
Connectivity fallback	Suggests practical steps if phone or internet service is down.
Maps and facilities	Keeps shelters, clinics, registration desks, and NGO offices available offline where possible.
Multilingual support	Supports Arabic, English, French, German, Swedish, and Spanish.

Impact

CrisisConnect AI helps teams prepare before deployment, reduces time spent searching documents, supports multilingual people in stressful situations, and keeps essential guidance available when connectivity is limited. The design follows do-no-harm principles and escalates high-risk medical, legal, shelter, and protection issues to qualified responders.
